***A tough vinyl silver surfaced membrane is stretched and heat shrunk over a timber frame creating a lightweight and easily moved hung or flown mirror surface.***

Since the Mirror is a surface application glassless mirror is in fact sharper and brighter than glass.

**OH&S compliant.** Completely shatterproof it negates the potential for injury and reduces your exposure to liability claims. It is also non-fogging and has no distortion or ghost imaging. When hung it requires **no more fixing than a large Picture**, i.e. just a couple of screws or nails. What's more due to this ease of installation the Glassless mirror ends up only **fractionally dearer than glass** and of course **you can take it with you should you decide to move!**

Although it is very tough and durable the Mylar Mirror may be damaged by sharp instruments. Minor damage in the way of dents from clumsy fingers can generally be "smoothed out" with simple heat application such as a hairdryer to re-tension the surface.

Available in freestanding models, as a wall fixture or as a wall "leaning" model with protective covers front and back for those that cannot fix their mirrors and need to regularly and safely, store them away.

The assembled freestanding mirror tilts down and locks for footwork or up for kinetic awareness or can simply roll away for storage. It has locking castors so as to remain fixed when in position. Detachable feet can turn parallel for storage. The rear of the mirror can be supplied as a white board or pin board on request.

Any of the mirrors can be supplied with a self attaching protective sheet if required. With proper care these mirrors will give years of use and any can be supplied with a protective cover if required. An A4 sample can be purchased for **\$25.00**. This will be deducted from any subsequent purchase.

***MYLAR MAGIC  
"better and brighter  
than glass"***
